

NATHANIEL LUCERO

Full Stack Developer

nathaniellucero.dev@gmail.com | +63 967 483 8213 | Zambales, Philippines
github.com/nathan-dotnet | nathaniellucero.vercel.app | linkedin.com/in/nathaniel-lucero052903

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with experience designing and deploying scalable web applications and IoT-integrated industrial systems. Proficient in ASP.NET Core, C#, React, and TypeScript, with a strong foundation in clean architecture and RESTful API design. Proven ability to independently deliver production-grade systems — including real-time PLC monitoring dashboards and manufacturing workstation applications — actively used in live factory environments. Passionate about building reliable, maintainable software and eager to contribute to a global team.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Razor Pages, Bootstrap, HTML5, Vite
Backend: ASP.NET Core MVC / Web API, C#, Node.js, Express.js, Python, PHP, Entity Framework Core, JWT, REST API
Database: Microsoft SQL Server (MSSQL), PostgreSQL, MySQL
IoT: Keyence PLC integration, SignalR real-time updates, SCADA-style dashboards, industrial automation
Tools: Git, GitHub, Visual Studio, VS Code, SSMS, Clean Architecture, Agile, ESLint
Languages: English (Fluent), Filipino (Native)

WORK EXPERIENCE

Full Stack Developer — Sanyo Denki Philippines

2025 – Present

Japanese manufacturing company — industrial fans, cooling systems & automation

- Independently designed and deployed an IoT Engineering Dashboard connecting Keyence PLC machines to a real-time web interface, used by engineering personnel across multiple production lines.
- Independently built YUDOO Web, a full-stack manufacturing workstation application featuring digital process instructions, PLC polling, real-time SignalR updates, daily logs, and output monitoring — now actively deployed on the factory floor.
- Independently built the SMD Tower (Tape & Reel Cabinet) management system from scratch, now actively deployed within the manufacturing facility.
- Built and maintained full-stack web applications using ASP.NET Core Web API and React/Next.js (TypeScript), applying clean architecture and RESTful design principles.

PROJECTS

IoT Engineering Dashboard

TypeScript · React · ASP.NET Core Web API

- Real-time factory monitoring dashboard integrating industrial PLC systems — live equipment status, anomaly alerts, and operational reporting across multiple production lines.

SMD Tower — Tape & Reel Cabinet System

ASP.NET Core MVC · C# · MSSQL

- Inventory and logistics system for SMD component management in a manufacturing environment, deployed at Sanyo Denki Philippines.

YUDOO Web — Manufacturing Workstation App

React 19 · TypeScript · ASP.NET Core (.NET 10) · SignalR · MSSQL

- Full-stack manufacturing workstation application with digital process instructions, PLC polling service, real-time station updates via SignalR, daily log, output monitoring, and user management.

BudgetElly — Personal Finance App

TypeScript · React · Node.js |
github.com/nathan-dotnet/budgetElly

- Full-featured personal finance tracker with expense categorization, budget limits, and data visualization. Deployed on GitHub Pages.

EDUCATION

BS Information Technology — President Ramon Magsaysay State University

2021 – 2025

Zambales, Philippines

CERTIFICATIONS

ASP.NET Core MVC — TestDome | SQL — TestDome | Python — TestDome | JavaScript — TestDome
